Allowance of Application # 10/711,168

1. The following communication is in response to applicant's amendment received 5-October-2006. Claim 1 has been cancelled as per this amendment, and new claim 31 has been added.

Examiner's Amendment

2. An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 C.F.R. 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the Issue Fee. Authorization for this Examiner's Amendment was given by Jack Friedman (Reg. No. 44,688) on 13-November-2006.

2.1 In the Claims:

Claim 22 line 6 Change "said circuit subdivisions" to --said equivalent circuit subdivisions--.

Claim 30 line 1 Delete "combining the equivalent circuit subdivisions" and Add --outputting said description--.

Reasons for Allowance

3. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter.

In re Application of: Breiland et al.

3.1 The instant application is directed to a non-obvious improvement over the inventions described in the related prior art, and specifically the invention in U.S. Patent No. 6,584,596 to Buffet et al., which describes designing voltage partitions in a solder bump package for an integrated chip, which allows for one or more regions (islands) of a chip to be powered by both a chip-wide power source and one or more additional voltage island power sources which can be switched on and off by the user as the operation of the integrated circuit demands.

3.2 The improvement of the present invention, in various embodiments, provides a method of power supply noise and signal coupling analysis for creating a frequency-dependent electrical model related to a microelectronic package, wherein: 1) the microelectronic package structure is divided into a hierarchy of smaller cubes or cells; 2) the size of each cell is determined from the fastest signal rise time in the microelectronic package, as in independent claims 2 and 19, or, alternatively, as a fraction of the wavelength of the signal knee frequency, as in independent claims 12 and 22; 3) equivalent circuits are calculated for each of the cells; and 4) a description utilizing the equivalent circuits is outputted to create the model. These patentable distinctions are included in each of the independent claims, nos. 1, 12, 19 and 22.

3.3 The art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible <method for creating a frequency-dependent electrical model> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 8, line 8 through page 25, line 8, and Figures 1-13C. In view

In re Application of: Breiland et al.

of the foregoing, the claims of the present application are found to be patentable over the prior art.
